

Mobile training center 2.0

Even in difficult times you can count on us.

Flexible training at your premises

Especially under special circumstances like travel restrictions, the Berndorf Band Group is very keen to provide you with the best possible on-site support. For this reason the Berndorf Band Group's mobile training center has been upgraded to the latest technologies and is ready for worldwide use. We make your training as easy and convenient as possible. For a session with the mobile training center 2.0 Berndorf experts visit you at your site with all necessary equipment and materials. Everything you need to provide is a room, electricity, technical gases and then the training can start.

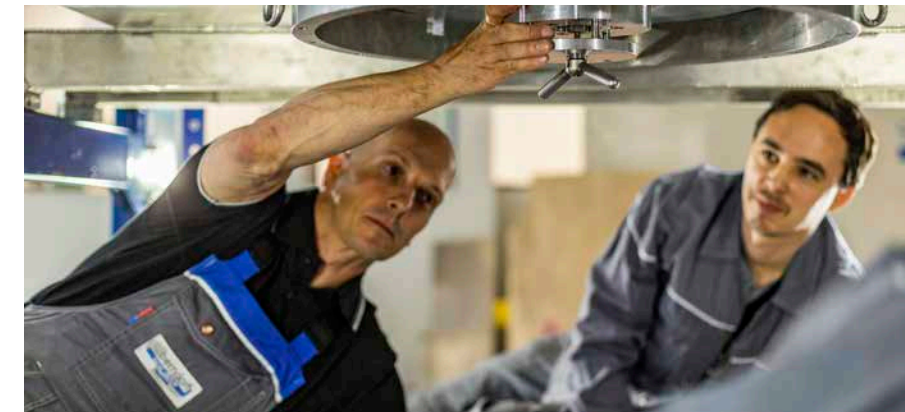

YOUR ADVANTAGES:

- » Targeted training of your employees so that they can detect damages at an early stage and remedy them quickly
- » Berndorf experts are available on site to answer any questions you might have
- » No visa, travel, accommodation and subsistence costs for the employees to be trained
- » Direct implementation of the learned input on your steel belt.

Practical experience with Berndorf experts

Thanks to the years of developments, even more realistic belt simulations can be displayed now with the Berndorf Band Group's mobile training center. The compact design combined with a sophisticated belt tensioning system offers the possibility to conduct steel belt trainings for up to two employees on your site. Thus, the training courses can be held in the familiar environment of the employees. In addition, the Berndorf trainer can directly address issues related to practical problems of your production.

Additionally to the practical training, our certified trainers will also cover theoretical lectures during the training. The Berndorf training is completed with a certificate of participation.

Following a Berndorf Band Group training course with the mobile training center 2.0, the attendees will be able to repair minor damages by themselves and gain skills needed to recognize and evaluate risk factors for belt damage at an early stage. The newly acquired knowledge helps to avoid major damage and longer production downtimes.

A training includes the following topics:

- » Repairing of dents and deformations
- » Repairing of scratches and undercuts
- » Inserting patches and trapezoids
- » Welding cracks
- » Insertion of vee-ropes
- » Repairing damaged steel belt edges
- » Measuring techniques: measuring damages before, during and after a repair
- » Testing of various developed Berndorf service tools
- » Patching tool and further applications on request

The successful Berndorf Technical Days, which have been established for years, can be easily combined and booked with the mobile training center. Berndorf experts share their knowledge about your steel belt application in an informative theoretical part. Afterwards you can put your theoretical skills in the mobile training center into practise.

If you prefer trainings locally, you still can visit us in one of our worldwide training centers. Feel free to contact your Berndorf Band Group expert for support in choosing the best solution.
